Hiring Team
Oracle Morocco R&D Center
Casablanca, Morocco

Re: Research Assistant – PFE 2027 (Job ID 330375)

Dear Hiring Team,

I am applying for the Research Assistant – PFE 2027 internship at Oracle Morocco R&D Center. I am a software engineering student at 1337 Coding School (42 Network), and I want to contribute to real Oracle products while learning from experienced engineers.

At 1337, I have built projects in Python and C that taught me algorithmic thinking and careful debugging. In Fly-in, I designed A* route planning for drones moving through connected zones with different traversal costs, and built a Pygame visualization to check route and occupancy constraints. In Call-me-maybe, I prototyped constrained text generation with PyTorch and Hugging Face Transformers: I analyzed logits over a 151,936-token vocabulary and tested next-token masking so a language model returns structured JSON function calls. This work showed me how much engineering it takes to make emerging AI technologies reliable, which is why Oracle's focus on embedding AI across its products appeals to me.

Outside coursework, I reached Gold League and ranked #3,692 in CodinGame's Mad Pod Racing challenge. With my team musk3tears, I placed in the top 15 at the capture-the-flag competition organized by Zone01 in Oujda. These experiences taught me to solve problems under time pressure and to work closely with teammates, as 1337's peer-learning model also requires.

I would welcome the chance to bring my algorithmic problem-solving, debugging and rapid prototyping skills to Oracle's R&D team. Thank you for considering my application. My CV is attached, and I would be glad to discuss it in an interview.

Sincerely,
Ayoub Kaarich
